

Telegram Digital Service Log Bot

ဤသည်မှာ ကျောင်းများအတွက် Digital Service Log စနစ်ကို အသုံးပြု၍ Python နှင့် `python-telegram-bot` library ဖြင့် ရေးသားထားသော Telegram Bot တစ်ခုဖြစ်သည်။

This is a Telegram Bot built with Python and the `python-telegram-bot` library for a school's Digital Service Log System.

Features (လုပ်ဆောင်ချက်များ)

- **/start** command: Welcome message and role selection (Technician or User).
- Technician can create new service logs step by step (device ID, user name, user chat ID, service done, parts used).
- Send confirmation to user via bot with an inline button.
- User confirms with "Confirm & Sign" button, which acts as a digital signature (records timestamp, date, user ID).
- User receives a confirmation message.
- Technician receives a notification when the user confirms.
- **/history** command: View past service logs for both Technician and User roles.
- Stores all data in an SQLite database.

Setup Instructions (တပ်ဆင်နည်း)

1. Clone the repository (Repository ကို ကူးယူခြင်း)

Bash

```
git clone <repository_url> # If applicable, otherwise assume files are already  
cd /home/ubuntu/telegram-bot
```

2. Install dependencies (လိုအပ်သော package များ ထည့်သွင်းခြင်း)

Bash

```
pip install -r requirements.txt
```

3. Initialize the database (ဒေတာဘေ့စ် စတင်တည်ဆောက်ခြင်း)

Run the `database_setup.py` script to create the necessary SQLite tables:

Bash

```
python3 database_setup.py
```

This will create a `service_logs.db` file in the same directory.

4. Configure the Bot Token (Bot Token ထည့်သွင်းခြင်း)

Open `main.py` and replace `TOKEN` with your actual Telegram Bot Token:

Python

```
TOKEN = "YOUR_BOT_TOKEN_HERE" # Replace with your bot token
```

Note: The provided token `8542986466:AAFQK2ZVjnGc-ts1HcPkgsj5Lsl5os5N57U` is already set in `main.py`.

5. Run the Bot (Bot ကို စတင်ခြင်း)

Bash

```
python3 main.py
```

Your bot should now be running and accessible via Telegram.

Usage (အသုံးပြုပုံ)

For Technicians (နည်းပညာရှင်များအတွက်)

1. Start the bot: Send `/start`
2. Select role: Tap "Technician (နည်းပညာရှင်)"
3. Create new log: Send `/newlog`
4. Follow prompts to enter: Device ID, User Name, User's Telegram Chat ID, Service Done, Parts Used.
 - **User's Telegram Chat ID:** This is crucial for the bot to send the confirmation message to the correct user. The technician needs to obtain this from the user (e.g., user can send `/start` to the bot and forward their chat ID to the technician).

For Users (အသုံးပြုသူများအတွက်)

1. Start the bot: Send `/start`
2. Select role: Tap "User (အသုံးပြုသူ)"
3. Receive service confirmation messages from technicians.
4. Tap "Confirm & Sign (အတည်ပြုပြီး လက်မှတ်ထိုးပါ)" to digitally sign the service log.
5. To view past logs: Send `/history`

Database Schema (ဒေတာဘေ့စ် ပုံစံ)

service_logs table

Column Name	Type	Description
id	INTEGER	Primary Key, Auto-incrementing
technician_name	TEXT	Name of the technician
device_id	TEXT	ID of the device serviced
user_name	TEXT	Name of the user (e.g., teacher)
service_done	TEXT	Description of service performed
parts_used	TEXT	Parts used for the service
status	TEXT	Current status (e.g., 'Pending Confirmation', 'Confirmed')
created_at	TIMESTAMP	Timestamp of log creation
user_chat_id	INTEGER	Telegram Chat ID of the user
technician_chat_id	INTEGER	Telegram Chat ID of the technician
confirmation_message_id	INTEGER	Message ID of the confirmation sent to user

confirmations table

Column Name	Type	Description
id	INTEGER	Primary Key, Auto-incrementing
service_log_id	INTEGER	Foreign Key referencing service_logs.id
user_id	INTEGER	Telegram User ID of the confirmer
user_telegram_name	TEXT	Full name of the Telegram user who confirmed
confirmed_at	TIMESTAMP	Timestamp of confirmation
